CSTOOL.io

The Cybersecurity Toolbox

Existing cybersecurity tools have high entry barriers:

You have to ask for a personal sales demonstration...

You have to install, roll-out, customize, arrange a 30 day PoC...

Or they follow a premium pricing strategy aimed at servicing few, large clients...

Large companies

...don't realize that solutions are there. Roll their own or stick with XLS although unhappy.

Buying the cow

Tools are monolithic. You need it for one job but you buy the whole thing.

Small companies

...can't afford it, invest more time using XLS, Outlook.

IT Departments

...need to get involved, take time to provide test environment.

Make or buy

Self-grown solutions end up costing much more, but off-the-shelf tool was not visible enough.

The effects

© 2018 Alexander Koderman, info@cstool.io

A tool that is good enough and
works now beats the competition.

Introducing CSTOOL.io

A cloud-based, secure, open, scalable, self-customizable Cybersecurity Toolbox.

Tech Stack

Built on open source software and cloud infrastructure
